

USB CAR CHARGERS BUYING GUIDE

OUTPUT IN AMPERES

Any USB charger offering an electric output of 2.4A is considered good enough. If you require a faster charging method

NUMBER OF PORTS

If you use multiple devices or have a few people in the car in need for a quick charge – it would not hurt to invest in a charger with multiple ports.

CABLE

I would suggest you not to purchase a charger with a permanently attached cable. In case the cable fails – an entire change in charger is necessary. Instead get a charger with a removable cable.

BRAND

Conclusively all bad or poorly designed chargers and cables disrupt and botch the inner circuitry of a phone.

FAST CHARGING

Most chargers today come with the QC or Qualcomm fast charging ability.

QUALITY

A heavy duty and well built charger will last you longer than any cheap alternative you can purchase.
