Benefits of double-door refrigerators

1

They have superior storage capacity. Average usable space is generally between 230 to 700 Litres.

2

They come with an enhanced cooling technology that helps preserve fruits and vegetables and keeps them fresh for a longer period.

3

They are equipped with frost free technology. This ensures that there is no frost build-up in the freezer, and therefore no need to manually defrost it.

4

Because of their superior storage capacity and larger shelf size, double-door refrigerators are ideal for a family of 4-5 members.

5

By providing a separate compartment for freezing, double-door refrigerators provide a larger cooling space.

6

Design wise, double-door refrigerators have multiple door baskets and adjustable shelf racks.

7

The shelves are made from toughened glass. This makes them stronger, more durable and less prone to cracking and breakage.
