Tips To Buy The Best Bluetooth Speaker For Yourself

Do you want to take it hiking, to the beach, to your back patio? Is it for casual use or perhaps for some level of professional use? Give some thought to this before buying a Bluetooth speaker.

1

Intended Use

Should be able to connect via Bluetooth, must include an aux input, other connectivity options such as Wi-Fi etc.

2

Features

The bigger the size of the speaker, the better its sound will be. However, the bigger the speaker, the less portable it is. You can always purchase a smaller speaker for travel and a bigger one for better sound.

3

Size

Smaller speakers can typically run in a 2 to 10-watt range. A bigger speaker takes more power. Just keep in mind that the power output will be the limiting factor in just how loud the speaker can get.

4

Power or wattage

One decision you can make is whether you prefer the battery to be removable or in-built. Most models do not offer removable batteries. It is advisable to get speakers offering at least 6 and ideally 8 hours of playback time.

5

Battery Life

The standard range for Bluetooth is 33 feet or 10 meters, but some speakers offer an extended range of up to 30 meters or 100 feet which can come in handy particularly outdoors.

6

Bluetooth Range

Many of the latest wireless speakers are equipped with Bluetooth versions 4.1 or 4.2. Bluetooth 3.0 speakers work fine, but each successive version of Bluetooth brings small upgrades. Bluetooth 5.0 has four times the range and twice the speed of Bluetooth 4.2.

7

Bluetooth Version

The voice control feature of a Bluetooth speaker combines great sound with Amazon Alexa, Google Assistant or Microsoft Cortana voice assistant. So, along with streaming music from your mobile device, you'll have your own personal assistant to get you the latest news just by using your voice.

8

Voice control

Choose a wireless speaker that's water and weather resistant. From the pool to the beach to all your outdoor adventures, water and weather-resistant Bluetooth speaker will keep the playlist going wherever you are. Some models are even submersible, so they can survive an accidental plunge into the water.

9

Water Resistant

Amplify your listening experience with portable speakers that can pair directly with each other. This feature is especially helpful when you want to share your music with a group of people in an outdoor setting where sound needs to travel.

10

Pair Multiple Speakers
